

Technical Product Data Sheet

Tech. Sheet #	005	Version	1.4	Created:	September 20 th 2016	by	P. Cáceres	Last updated	March 05 th 2019	by	P. Cáceres
Product Name	Laccase (LAC)		Product Code	enz_lac_005		Current Phase	Finished				
Core information											
Product Type	Lyophilized Enzyme	Producing microorganism	<i>Escherichia coli</i> (recombinant)		Microorg. code	BL21		Origin	Thermophilic Bacteria		
EC Number	1.10.3.2			CAS-No.			80498-15-3				
Product Description	Laccase is a copper-containing oxidase that catalyzes the oxidation of different organic and inorganic compounds.										
Temp Range °C	30-90°C	Opt. temp °C	80°C	Thermo stability	Maintains at least 60% of its activity after 2 hours of exposure at 60°C.			pH range	5.5-7.5	Opt. pH	6.0
Substrate	Syringaldazine and O ₂										
Products	Oxidized Syringaldazine and H ₂ O										
Reaction	Syringaldazine + O ₂ → Oxidized Syringaldazine + 2 H ₂ O										
U (Unit definition)	One unit (U) of laccase activity was defined as a change in absorbance of 0.001 measured 530 nm per minute, at 70°C and pH 6.0 using syringaldazine as substrate										
Specific Activity	≥ 300,000 U/mg										
Protein concentration	≥ 15% (w/w)										
Molecular mass	≈ 59 kDa			Number of subunits	1						
Substrate chirality	No										
Product chirality	No										
Alternative substrates tested	Gallic acid										
Form	Lyophilized powder										
Other components	0.05M Tris HCl pH 8.0 and 0.85 M NaCl (before lyophilizing)										
Stability	At -20°C, it maintains the reported activity (≥ 300,000 U/mg) at least for 11 months. (Preliminary Data)										
Storage temperature	-20° C										
Shipping conditions	Inside a Styrofoam-box with ice-packs										

pH dependence

Fig 1. pH dependence of recombinant LAC. Activity was measured by monitoring pH from 5.0 to 8.0 at 70°C.

Temperature dependence

Fig 2. Temperature dependence of recombinant LAC. Activity was measured by monitoring temperature from 30 to 100° C using 100 mM Phosphate buffer (pH 6.0).

Thermo-stability

Fig 3. Thermostability of the recombinant LAC. activity was measured by monitoring at three different temperatures (60°C, 70°C and 80°C) using 100 mM Phosphate buffer (pH 6.0).

Note: When using 200 mM sodium acetate pH 6.0, SWA Laccase maintains: ~75% of its activity after 6 hours of exposure at 60°C, at least 60% of its activity after 2 hours of exposure at 70°C and at least 60% of its activity after 30 minutes of exposure at 80°C.
